

# REDUCE STRETCH WRAP WITH SKID-LOCK!

Three steps to:

**REDUCE YOUR STRETCH WRAP USAGE BY MORE THAN 50%!**

**1 SKID-LOCK®** - a water based Food Packaging Adhesive - is applied on top of cases before being palletized.

**2** The cases are then placed on the pallet where a unique adhesive bond forms.

**3** Stretch wrap is then applied to the top two tiers of cases as shown.

Total unitizing cost is decreased by *up to 50%*, stability is increased, and solid waste is reduced!

**Less time in the stretch wrapper means faster throughput too!**
